

Kishore B

Senior Gameplay / Systems Engineer

+91 94432 33771 — kishore.b.1996@gmail.com — [LinkedIn](#) — KishoreBoopathi.github.io

Profile

Senior gameplay-focused software engineer with 5+ years of experience building multiplayer and system-driven games across Unity, Unreal, and emerging platforms. Strong expertise in gameplay architecture, backend-integrated systems, deterministic networking (Photon Quantum), live service infrastructure, and performance optimization.

Experience

Senior Software Engineer – Flecks Labs Jul 2025 – Dec 2025

Scoop Up — Multiplayer Party Game (Meta Horizon Worlds, TypeScript)

- Developed multiplayer gameplay systems for Meta Horizon Worlds within the Desktop Editor ecosystem.
- Built modular and scalable gameplay systems under platform and performance constraints.

Tiger Goat — 1v1 Strategy Game (Unity, Photon Quantum, Android)

- Sole developer: built the game end-to-end from prototype to Play Store launch using Photon Quantum in Unity.
- Architected all deterministic multiplayer systems including state synchronization, input handling, and rollback.
- Implemented bot matchmaking and AI decision logic for single-player and mixed-mode matches.
- Integrated Firebase for analytics, telemetry, and match tracking to support data-driven iteration.

Unity Game Developer – Studio Sirah Nov 2021 – Jun 2025

Kurukshetra: Ascension — Multiplayer 2D Card Battler (Unity • Nakama • Golang)

Google Play Best Indie Game 2023

- Progressed into senior gameplay engineer role overseeing the programming stack and mentoring two junior developers.
- Designed and implemented core gameplay systems including card architecture, deck systems, match flow, store, and live event systems.
- Reduced mobile build size from 1GB to 450MB using Unity Addressables and downloadable bundles.
- Stabilized multiplayer performance on low-end Android devices; owned CI/CD pipeline and acted as Release Master.

Kalpa: Mythic Hero Defense — Tower Defense (Unity, Android)

- Built the game from scratch: developed wave spawning system, level initialization with dynamic map parsing, and pathfinding logic.
- Implemented AI movement system with intelligent obstacle avoidance and dynamic path resolution.
- Optimized performance for scenes with large numbers of concurrent AI agents spawning and moving simultaneously.

Game Developer Intern – ZygoBots 2020 – 2021

- Developed gameplay mechanics and 3D levels in Unity; conducted QA testing and gameplay balancing.

Software Engineer – Zoho Corporation 2016 – 2018

- Developed and optimized scalable frontend and backend systems for ManageEngine Password Manager Pro.

Technical Skills

Languages: C#, C++, Golang, TypeScript, Java, Python

Engines: Unity, Unreal Engine, Horizon Worlds Desktop Editor

Multiplayer: Photon Quantum (Deterministic Simulation), Nakama

Backend & Analytics: Golang, Firebase

Tools: Jenkins, AWS, Addressables, Prefabs, DOTween, Odin Inspector

Version Control: Git, PlasticSCM, Perforce, Bitbucket

Education

M.S. Game Design – Full Sail University 2020

B.Tech Information Technology – PSG College of Technology 2013 – 2017
